El Paso County Retirement Plan

ACTUARIAL VALUATION REPORT as of January 1, 2024

May 8, 2024

The Board of Trustees El Paso County Retirement Plan 2880 International Circle, Suite N030 Colorado Springs, CO 80910

Re: Actuarial Valuation of the El Paso County Retirement Plan as of January 1, 2024

Dear Board Members:

We are pleased to present our Report on the actuarial valuation of the El Paso County Retirement Plan as of January 1, 2024.

This Report presents the results of the January 1, 2024 actuarial valuation of the El Paso County Retirement Plan. The Report describes the current actuarial condition of the El Paso County Retirement Plan, determines the Actuarially Determined Contribution (ADC), and analyzes changes in these rates.

We certify that the information contained in this report is accurate and fairly presents the actuarial position of the El Paso County Retirement Plan as of the valuation date.

All of our work conforms with generally accepted actuarial principles and practices, and to the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion, our calculations also comply with the requirements of, where applicable, the Internal Revenue Code, ERISA, and the Statements of the Governmental Accounting Standards Board.

The valuation was based upon information, furnished by the Plan, concerning Plan benefits, financial transactions, active members, terminated members, retirees and beneficiaries. We checked for internal and year-to-year consistency, but did not audit the data. This report and these calculations are not intended as legal or accounting advice, and we would recommend review by legal counsel for the compliance of these calculations with all relevant agreements.

This report was prepared using our proprietary valuation model and related software which in our professional judgment has the capability to provide results that are consistent with the purposes of the valuation and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

The Board of Trustees May 8, 2024 Page 2

The valuation results summarized in this report involve actuarial calculations that require assumptions about future events for the Pension Plan. Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following:

- plan experience differing from that anticipated by the economic or demographic assumptions;
- changes in economic or demographic assumptions;
- increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status) and;
- changes in plan provisions or applicable law.

The 11.40% employer and 8.00% employee contributions are the rates that comply with the Plan Document. Due to the many factors affecting a retirement system, users of this report should be aware that contributions made at that rate do not necessarily guarantee long-term benefit security.

This report does not include a detailed assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment. We encourage a review and assessment of investment and other significant risks that may have a material effect on the plan's financial condition.

We believe that the assumptions and methods used in this report are reasonable and appropriate for the purpose for which they have been used. However, other assumptions and methods could also be reasonable and could result in materially different results. In addition, because it is not possible or practical to consider every possible contingency, we may use summary information, estimates or simplifications of calculations to facilitate the modeling of future events. We may also exclude factors or data that are deemed to be immaterial.

Certification

The undersigned are independent actuaries and consultants. Paul Wood, Bill Detweiler, and Krysti Kiesel are actuaries and meet the Qualification Standards of the American Academy of Actuaries. All three of the undersigned are experienced in performing valuations for large public retirement systems.

Respectfully submitted,

Gabriel, Roeder, Smith & Company

Paul Wood, ASA, FCA, MAAA

SECTION A

EXECUTIVE SUMMARY

Executive Summary

Valuations are prepared annually, as of January 1 of each year, the first day of the fiscal year. The primary purposes of the valuation report are to measure the plan's liabilities, to determine the Actuarially Determined Contribution rate and to analyze changes in the El Paso County Retirement Plan's actuarial position.

In addition, the report provides summaries of the member data, financial data, plan provisions, and actuarial assumptions and methods.

Exhibit A.1						
Executive Summary						
	Ja	nuary 1, 2024		January 1, 2023		
1. Actuarially Determined Contribution						
a. Total	\$	47,030,192	\$	40,166,403

iv. Average Age ²		42.2		42.5		
v. Average Service ²		6.8		6.7		
b. Members with Refunds Due Counts		617		523		
c. Deferred Vested Member Counts ³		343		345		
d. Retired and Disabled Member Counts		1,942		1,898		
e. Beneficiary Counts		145		148		
g. Total Members Included in Valuation		6,125		5,901		

 $^{^{}m 1}$ Includes 42 members on leave of absence in 2023 and 53 members on leave of absence in 2024.

² Excludes members on leave of absence.

³ Includes 6 deferred disableds and 2 deferred beneficiaries in 2023, and 7 deferred disableds and 2 deferred beneficiaries in 2024.

Financing Objectives

The El Paso County Retirement Plan is supported by member contributions, employer contributions, and net earnings on the investments of the fund. Contribution rates are set in the plan document. Currently the contribution rate is set at 8.00% for members. The contribution rate for employers increased from 10.80% to 11.40% at January 1, 2024. Future increases are planned on January 1 of each year until the ultimate rate of 12.00% is reached on January 1, 2025.

The combined member and employer contributions are intended to be sufficient to pay the normal cost and to amortize the Unfunded Actuarial Accrued Liability (UAAL). Amortization bases for the UAAL are established each year and amortized based on the Board's policy. The Board's policy consists of amortizing the unfunded liability as of January 1, 2019, over a closed 30 year period with each subsequent amortization base created as a result of year to year experience changes over individual 25 year closed periods.

Progress toward Realization of Financing Objectives

The UAAL/(surplus) and the funded ratio (ratio of the actuarial value of assets to the actuarial accrued liability) illustrate the progress toward the realization of certain financing objectives. Based on the actuarial valuation as of January 1, 2024, the Plan has an unfunded liability of \$294.15 million and a funded ratio of 62.40%. The funded ratio decreased from 63.96% to 62.40% and the Net Employer Actuarially Determined Contribution (ADC) increased, from 12.58% of pay, to 13.97% of pay.

The Net Employer Actuarially Determined Contribution as a percentage of pay for the year beginning January 1, 2024 is 13.97%. The expected Employer contribution is 11.40% of pay which creates a contribution shortfall of 2.57% of pay. This compares to a shortfall in the prior year of 1.78% of pay. The calculated ADC under the Board's funding policy can be considered a "Reasonable Actuarially Determined Contributions" as required by the Actuarial Standards of Practice. The funded status is projected to slowly increase over the next 30 years. Section I contains the 30-year baseline projection.

Experience During the Year

The plan experienced a liability loss of \$18.3 million during fiscal year 2023. The largest source of this loss was due to salary increases that were greater than expected.

The plan experienced an actuarial asset loss of \$2.89 million during fiscal year 2023. This loss was due to the actuarial value of assets earning a return less than the assumed 7.00% return. The net overall result of the liability gain and the actuarial asset loss was an unfunded liability \$21.19 million higher than expected at January 1, 2024.

Assumptions and methods

The assumptions and methods have been updated since the prior valuation based upon the actuary's analysis and recommendations from the Experience Study for the four-year period ending December 31, 2023. These assumptions were adopted by the Board effective with the January 1, 2024 valuation report.

Below is a summary of the changes:

- 1. Individual merit salary increases: Slightly increase service-based rates.
- 2. Mortality: Update from the RP-2000 tables to Pub-10 tables with a 2-year set forward for females.
- 3. Mortality Projection: Update from MP-2017 scale to the ultimate MP-2020 scale.
- 4. Rates of disability: Reduce disability rates.
- 5. Rates of retirement: Slightly increase unreduced retirement rates for most ages, and smooth rates at age 55 and 62. Slightly increase rates of reduced retirement for ages 55 through 59, slightly lower rate for ages 60 and 61.
- 6. Rates of termination: Small adjustments to rates to better reflect actual terminations, lower rates for males and females for service greater than 20 years.
- 7. Refund elections: Increase elections to 100% for members prior to completing 8 years of service. Slightly lower election rate for service over 8 years.
- 8. Normal Cost: Updated normal cost methodology to eliminate the persistent new entrant and rehire losses (this update in methodology does not impact the funding period nor does it impact the accrued liability).

The assumption and method changes increased the accrued liability by \$12.4 million and increased the Actuarially Determined Contribution rate by 1.5% of pay.

The actuarial assumptions are summarized in Section G of our report. All actuarial assumptions used in this report are reasonable for the purposes of this valuations. Furthermore, the assumptions and methods used in this valuation follow the guidance in the applicable Actuarial Standards of Practice and are expected to have no significant bias.

The results of any actuarial valuation are dependent upon the actuarial assumptions used. Actual results can and almost certainly will differ, as actual experience deviates from the assumptions. Even seemingly minor changes in the assumptions can materially change the liabilities, calculated contribution rates and funding periods. The actuarial calculations presented in this Report are intended to provide information for rational decision making.

Benefit Provisions

All of the benefit provisions reflected in this valuation are those which were in effect on January 1, 2024. Since the prior valuation, the employer contributions have been increased from 10.80% to 11.40%. Future increases are planned on January 1 of each year until the ultimate rate of 12.00% is reached on January 1, 2025.

The benefit provisions are summarized in Section D of our Report.

Data

El Paso County staff supplied data for retired, active and inactive members as of January 1, 2024. We did not audit this data, but we did apply a number of tests to the data, and we have concluded that the data is reasonable and consistent with the prior year's data. El Paso County staff also supplied asset data as of January 1, 2024.

Financial Position

Due mostly to larger than expected increases in payroll and changes in actuarial assumptions, the funded ratio on both an actuarial value of assets basis and a market value of assets basis decreased from January 1, 2023 to January 1, 2024.

Exhibit A.2 Funded Status Summary (\$ in millions)				
Valuation Date	January 1, 2024	January 1, 2023		
Accrued Liability	\$782.27	\$724.78		
Actuarial Value of Assets (smoothed)	488.13	463.54		
Unfunded Accrued Liability (AVA basis)	\$294.15	\$261.24		
Funded Ratio (AVA basis)	62.4%	64.0%		
Market Value of Assets	\$457.10	\$431.54		
Unfunded Accrued Liability (MVA basis)	\$325.17	\$293.24		
Funded Ratio (MVA basis)	58.4%	59.5%		
Market Value Rate of Return	7.1%	(10.2%)		
Actuarial Value Rate of Return	6.4%	5.7%		

The funded status alone is not appropriate for assessing the need for future contributions. The funded status is also not appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations.

Investment losses increased the Actuarially Determined Contribution by roughly 0.1%. Liability losses increased the Actuarially Determined Contribution by approximately 0.6%. Total payroll growth and other factors including the decrease in normal cost decreased the Actuarially Determined Contributions by roughly 0.8%. Assumption and method changes increased the Actuarially Determined Contributions by 1.5%. The Employer Net Actuarially Determined Contribution of 13.97% of pay for Fiscal Year 2024 is based on contributions being made throughout the year.

Exhibit A.3 **Contribution Summary** All Numbers Reported Middle of Year, Percent of Pay January 1, 2024 January 1, 2023 **Fiscal Year Beginning Total Normal Cost** 12.90% 11.89% Amortization of UAL 8.78% 8.36% **Assumed Expenses** 0.29% 0.33% Total Actuarially Determined Contribution 21.97% 20.58% **Estimated Member Contribution** 8.00% 8.00% Actuarially Determined Employer Contribution 13.97% 12.58% **Estimated County Contribution** 11.40% 10.80% **Contribution Shortfall** 1.78% 2.57%

Amortization of Unfunded Actuarial Liability as of January 1, 2024

The Actuarially Determined Contribution (ADC) is calculated in accordance with the Funding Policy adopted by the Board. The unfunded actuarial accrued liability (UAAL) is amortized as a level percent of payroll using a layered approach beginning January 1, 2019. The UAAL as of January 1, 2019 was amortized over a 30-year closed period. Fluctuations in the UAAL due to plan experience different than assumed or changes in actuarial assumptions, methods or plan provisions subsequent to January 1, 2019 are amortized over a 25-year period.

The following summarizes the outstanding bases as of January 1, 2024.

	Exhibit B.5 Calcualtion of UAAL Amortization Payment

SUMMARY OF BENEFIT PROVISIONS

Summary of Benefit Provisions

Based on the Plan Originally effective September 1, 1967 and amended and restated effective January 1, 2022

Participation

Employers included in the Plan are El Paso County, El Paso County Public Health; Pikes Peak Library District; 4th Judicial District Attorney; El Paso County Board of Retirement; and any other agency, district, or governmental organization with employees now in existence or hereafter formed that is authorized for participation in the Plan by the Retirement Board.

Membership in the Retirement Plan is automatic upon the first day of Covered Employment. You are in Covered Employment when you are an elected or appointed official defined as a full-time employee or as a job-share employee by the Employer's Personnel Rules, Regulations and Policies.

You are not eligible to participate in the Retirement Plan if you are (1) officers and employees of any federally funded program that specifically excludes the use of federal funds for retirement programs and (2) leased employees within the meaning of Code Section 414(n)(2).

Member Contributions

Effective January 1, 2014, each member contributes 8.00% of compensation on a monthly basis. Effective July 1, 2005 interest on contributions is credited at a rate of 3.0% per annum compounded annually.

Contribution Accumulation means the sum of the Member's contributions to this Plan, together with the interest rate thereon.

After December 31, 1983 member contributions are picked up and paid by the County as provided in Code Section 414(h).

Employer Contributions

The Employer will contribute an amount that along with member contributions will be sufficient to provide benefits provided by the plan and pay all administrative expenses of the plan. The Employer will contribute an amount that along with member contributions will be sufficient to provide benefits provided by the plan and pay all administrative expenses of the plan. The Employer will contribute according to the following schedule:

- The Employer will contribute at a rate of 10.20% of pay for the period from January 1, 2022 through December 31, 2022.
- The Employer will contribute at a rate of 10.80% of pay for the period from January 1, 2023 through December 31, 2023.
- The Employer will contribute at a rate of 11.40% of pay for the period from January 1, 2024 through December 31, 2024.
- The Employer will contribute at a rate of 12.00% of pay for the period from January 1, 2025 and thereafter.

Credited Service

The sum of Past Service, Membership Service and Purchased Service. The Credited Service is used in determining the amount of pension benefits and benefit eligibility. Past Service includes any period of service rendered as a Full-Time Employee prior to September 1, 1967. Membership Service includes all service rendered as a Full-Time Employee after August 21, 1967. Purchased Service is limited to five years and is subject to the conditions outlined in Article IV Section 7 of the Plan Document. All service is measured in years and months.

Compensation

Compensation is the total regular compensation paid to the member, reflecting the normal regular salary or hourly wage rate, before any payroll deductions for income tax, Social Security, group insurance, or any other purpose, excluding bonuses, extra pay, overtime pay, workers' compensation, single-sum payments received in lieu of accrued vacation and sick leave upon termination of employment or during the course of employment, required contributions by the County under this Plan, or for Social Security, group insurance, retainers' fees under contract, or the like, but including compensation deferred under Sections 125, 403(b), 414(h), or 457 of the Internal Revenue Code.

Final Average Monthly Compensation

Members hired prior to January 1, 2022:

The average compensation of the highest paid 36 successive paid calendar months of Credited Service within the last 120 calendar months of Credited Service.

• Members hired on or after January 1, 2022:

The average compensation of the highest paid 60 successive paid calendar months of Credited Service within the last 60 calendar months of Credited Service.

Accrued Benefit (Monthly)

The benefit determined as for normal retirement payable at the member's normal retirement date considering current earnings and service.

Vested Accrued Benefit

Eligibility:

Members hired prior to January 1, 2013:

Five years of Credited Service.

• Members hired on or after January 1, 2013:

Eight years of Credited Service.

Benefit:

100% of the Accrued Benefit determined as of the date of termination payable at his Normal Retirement Date. The benefit may be reduced if payment commences before the Normal Retirement Date or the Special Early Retirement Date. The member may elect to receive his accumulated contributions in lieu of all other benefits.

Normal Retirement

Eligibility:

• Members hired prior to January 1, 2010:

Attainment of age 62.

• Members hired on or after January 1, 2010 and prior to January 1, 2013:

Attainment of age 62 and 5 years of Credited Service.

• Members hired on or after January 1, 2013:

Attainment of age 62 and 8 years of Credited Service.

Monthly Benefit:

Members hired prior to January 1, 2010:

2.22% of final average monthly compensation times years of credited service earned through December 31, 2012 plus 2.00% of final average monthly compensation times years of credited service earned on or after January 1, 2013.

Benefit shall not be greater than 75% of the member's final average monthly compensation.

• Members hired on or after January 1, 2010 and prior to January 1, 2013:

2.00% of final average monthly compensation times years of credited service.

Benefit shall not be greater than 75% of the member's final average monthly compensation.

Members hired on or after January 1, 2013:

2.00% of final average monthly compensation times years of credited service.

Benefit shall not be greater than 60% of the member's final average monthly compensation.

Regular Early Retirement

Eligibility:

• Members hired prior to January 1, 2013:

Attainment of age 55 and 5 years of Credited Service.

• Members hired on or after January 1, 2013:

Attainment of age 55 and 8 years of Credited Service.

Benefit:

Vested Accrued Benefit determined as of the Early Retirement Date, reduced by 0.25% for each month payments commence prior to the Normal Retirement Date.

Special Early Retirement

Eligibility:

• Members hired prior to January 1, 2010:

Age plus credited service equals 75 or more at termination.

- Members hired on or after January 1, 2010 and prior to January 1, 2013:
- Attainment of 5 years of credited service and age plus credited service equals 75 or more at termination.
- Members hired on or after January 1, 2013:

Attainment of 8 years of credited service and age plus credited service equals 75 or more at termination. A minimum age of 50 applies to members hired on or after January 1, 2016.

• Members hired on or after January 1, 2022 (Does not apply to Sworn Officers):

Attainment of 8 years of credited service and age plus credited service equals 80 or more at termination. Minimum age of 50 applies.

Benefit:

Vested Accrued Benefit determined as of the Special Early Retirement Date, unreduced for early payment.

Disability Retirement

Eligibility:

Total and permanent disability. Member qualifies for disability under the County's long-term disability plan or under Title II of the Social Security Act.

Benefit:

Normal Retirement Benefit considering annual rate of compensation at disability and Credited Service that would have accumulated if employment had continued uninterrupted to the later of the Normal Retirement Date, or the date that the County's long-term disability benefits end.

Benefits commence at Normal Retirement Date, or if later, the first day of the month after payments cease under the County's long-term disability insurance contract. For members hired on

or after January 1, 2022, the disability retirement age is equal to the applicable "retirement age" as defined in Title II of the Federal Social Security Act

Termination Benefit

Members with less than five years of Credited Service receive a refund of the member's contributions.

Pre-Retirement Death Benefit

• Member is not vested at his death:

Beneficiary receives member's accumulated contributions at date of death.

• *Member is vested at his death:*

Spouse receives two times member's accumulated contributions at date of death; or

A monthly benefit equal to 60% of the member's vested accrued benefit on his date of death, commencing the first day of the month after the member's death or age 55 whichever is later. If the member dies while in active service, on or after attainment of age 62 or attainment of eligibility for immediate retirement under the rule of 75, the surviving spouse is eligible to receive a monthly benefit payable for life as if the member retired the day before death and elected the 100% joint and survivor annuity.

Pre-Retirement Death Benefit

A lump sum death benefit of \$3,000 is payable to the member's designated beneficiary. In addition, applicable benefits will be paid if the member has elected an option providing for payments to a beneficiary, or has elected the normal form of benefit and dies prior to having received benefits for 120 months, or prior to having received benefits equal to his total accumulated contributions as of the date of his retirement.

Normal Form

• Members hired prior to January 1, 2022:

10-year certain and life

Members hired on or after January 1, 2022:

Straight life annuity

Optional Forms

- 100% joint and survivor annuity
- 50% joint and survivor annuity
- 100% joint and survivor annuity with pop up
- 50% joint and survivor annuity with pop up
- Single life annuity

Optional Form Conversion Factors

Optional annuity forms are actuarially equivalent based on 8.00% interest and the 1994 Group Annuity Mortality table blended 50% male and 50% female.

Payment Date

Benefits are paid on the first day of the month following eligibility for receipt.

Inflation 2.50%

Cost of Living Adjustments N/A

ACTUARIAL ASSUMPTIONS AND METHODS

Summary of Actuarial Methods and Assumptions

I. <u>Valuation Date</u>

The valuation date is January 1st of each plan year. This is the date as of which the actuarial present value of future benefits and the actuarial value of assets are determined.

II. <u>Actuarial Cost Method</u>

The actuarial valuation uses the Entry Age Normal actuarial cost method. Under this method, the employer contribution rate is the sum of (i) the employer normal cost rate including administative expesses, and (ii) a rate that will amortize the unfunded actuarial liability.

- 1. The valuation is prepared on the projected benefit basis. The present value of each participant's expected benefit payable at retirement or termination is determined, based on age, service, sex, compensation, and the interest rate assumed to be earned in the future. The calculations take into account the probability of a participant's death or termination of employment prior to becoming eligible for a benefit, as well as the possibility of terminating with a service benefit. Future salary increases are also anticipated. The present value of the expected benefits payable on account of the active participants is added to the present value of the expected future payments to retired participants and beneficiaries to obtain the present value of all expected benefits payable from the Plan on account of the present group of participants and beneficiaries.
- 2. The employer contributions required to support the benefits of the Plan are determined following a level percent funding approach, and consist of a normal cost contribution including administrative expenses and an accrued liability contribution.
- 3. The normal contribution is determined using the Entry Age Normal cost method. Under this method, a calculation is made to determine the average uniform and constant percentage rate of employer contribution which, if applied to the compensation of each new participant during the entire period of anticipated covered service, would be required in addition to the contributions of the participant to meet the cost of all benefits payable on their behalf.
- 4. The unfunded accrued liability contributions are determined by subtracting the actuarial value of assets from the actuarial accrued liability. Amortization bases are established each year and amortized as a level percentage of payroll based on the Board's policy. The Board's policy consists of amortizing the unfunded liability as of January 1, 2019, over a closed 30-year period with each subsequent amortization base created as a result of year to year experience changes over individual 25-year closed periods. The current year amortization base is determined by taking the current unfunded liability less the outstanding amounts of prior year bases.

III. Actuarial Value of Assets

The actuarial value of assets is based on recognizing gains and losses over a five-year period where gains and losses are determined by comparing the projected market value of assets (based on the prior year's market value of assets, cash flows during the year and expected investment returns on those amounts) to the current year's market value of assets. The actuarial value of assets must be between 80% and 120% of market value.

IV. <u>Actuarial Assumptions</u>

A. <u>Economic Assumptions</u>

- 1. Investment return: 7.00% per annum, compounded annually, composed of an assumed 2.50% inflation rate and a 4.50% real rate of return. This rate represents the assumed return, net of all investment expenses.
- 2. Salary increase rate: Inflation rate of 2.50%, plus merit and productivity component as shown.

Completed	Pe	Percentage Increase in Salary				
Years of	8.4 c .::t	luflatia.	Total			
Service	Merit	Inflation	Total			
1	6.50 %	2.50 %	9.00 %			
5	3.25	2.50	5.75			
10	2.50	2.50	5.00			
15	1.75	2.50	4.25			
20	1.50	2.50	4.00			
25	1.50	2.50	4.00			

1. Wage inflation: 3.00%

2. Amortization Payroll growth: 3.00%

B. <u>Demographic Assumptions</u>

1. Mortality rates (pre- and post-retirement) – The valuation assumes fully generational mortality. The base mortality table used for pre-retirement is the PubG-2010 Employee Mortality Table for General Employees, and the base morality table used for post-retirement is the PubG-2010 Healthy Retiree Mortality Table for General Employees. Females rates are set forward two years for both pre- and post-retirement. Future mortality improvements are assumed each year using the ultimate rates from the MP-2020 tables. Sample rates for 2024 shown below:

Sample	Probability of Death				
Attained	Pre-Retirement				
Ages	Men	Women			
20	0.03 %	0.01 %			
25	0.02	0.01			
30	0.03	0.01			
35	0.04	0.02			
40	0.05	0.04			
45	0.08	0.05			
50	0.12	0.08			
55	0.18	0.12			
60	0.26	0.18			
65	0.39	0.30			
70	0.59	0.50			

Sample	Probability of Death				
Attained	Post-Retirement				
Ages	Men	Women			
20	0.03 %	0.01 %			
25	0.02	0.01			
30	0.03	0.01			
35	0.04	0.02			
40	0.05	0.04			
45	0.09	0.09			
50	0.25	0.20			
55	0.36	0.26			
60	0.51	0.38			
65	0.76	0.63			
70	1.28	1.12			
75	2.27	2.01			
80	4.09	3.66			
85	7.60	7.07			
90	13.43	13.03			

1. Mortality rates (post-disablement) – PubG-2010 Disability Mortality Table for General Employees. Females rates are set forward two years. Future mortality improvements are assumed each year using the ultimate rates from the MP-2020 tables. Sample rates for 2024 shown below:

Sample	Probability of Death					
Attained	Post-Disability					
Ages	Men	Women				
20	0.34 %	0.16 %				
25	0.23	0.16				
30	0.29	0.25				
35	0.38	0.40				
40	0.53	0.62				
45	0.83	0.96				
50	1.33	1.31				
55	1.75	1.52				
60	2.07	1.70				
65	2.53	2.04				
70	3.28	2.72				
75	4.40	3.97				
80	6.29	6.12				
85	9.57	9.75				
90	14.88	14.31				

3. Disability rates. Sample rates shown below:

Sample Attained	Probability of Disablement Next Year				
Ages	Men	Women			
25	0.02 %	0.02 %			
30	0.02	0.02			
35	0.03	0.03			
40	0.05	0.05			
45	0.06	0.06			
50	0.10	0.10			
55	0.18	0.18			
60	0.18	0.18			

4. Termination rates (for causes other than death, disability or retirement): Termination rates are based on service. Termination rates are not applied after a member becomes eligible for a retirement benefit. Rates shown below:

Completed Years of	Probability of Termination Next Year					
Service	Men Women					
1	20.00	20.00 %				
5	10.00	13.00				
10	5.50	8.00				
15	4.00	3.00				
20+	2.00	2.00				

5. Refund Assumption for Active Members Who Withdraw:

Completed Years of Service	Percent Electing Refund			
0-7	100%			
8	50%			
9	40%			
10+	15%			

6. Retirement rates

Attained Age	Unreduced	Reduced
< 50	30.00%	
50	30.00%	
51	25.00%	
52	17.50%	
53	17.50%	
54	17.50%	
55	17.50%	7.00%
56	17.50%	7.00%
57	17.50%	8.00%
58	17.50%	9.00%
59	17.50%	10.00%
60	17.50%	10.00%
61	20.00%	10.00%
62	25.00%	
63	25.00%	
64	25.00%	
65	27.50%	
66	32.50%	
67	37.50%	
68	37.50%	
69-74	40.00%	
75+	100.00%	

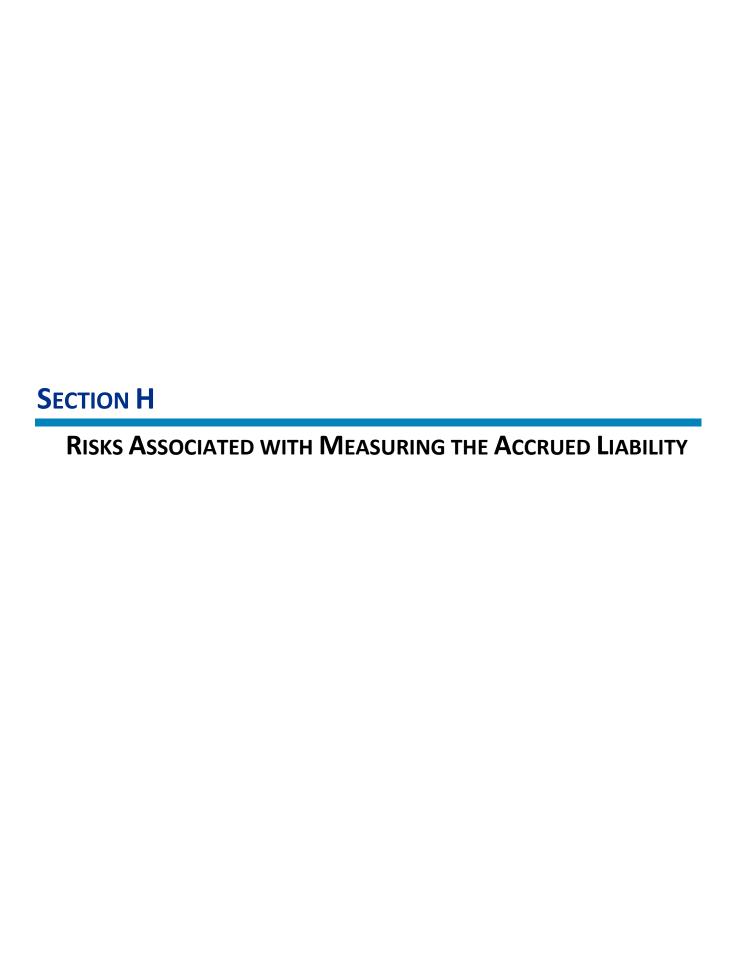

C. <u>Expense Loading.</u> Based on an estimate for the year by applying a year of inflation to the actual administrative expenses from Fiscal Year 2023. For 2024, the administrative expense loading is \$616,509.

D. Other Assumptions

- 1. Percent married: 75% of employees are assumed to be married.
- 2. Age difference: Male members are assumed to be three years older than their spouses, and female members are assumed to be three years younger than their spouses.
- 3. Cost of living adjustment: None.
- 4. Optional forms: Members are assumed to elect the normal form of benefit.
- 5. Future deferred vested participants are assumed to retire at age 55. Current deferred vested participants are assumed to retire at the earlier of age 57 or the age they meet special early retirement eligibility. Deferred disabled participants are assumed to commence benefits at age 62 (age 67 for members hired on or after January 1, 2022).
- 6. Pay increase timing: Middle of year.
- 7. Decrement timing: Decrements of all types are assumed to occur mid-year.
- 8. Eligibility testing: Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
- 9. Decrement relativity: Decrement rates are used directly, without adjustment for multiple decrement table effects.
- 10. Incidence of Contributions: Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in this report, and the actual payroll payable at the time contributions are made.
- 11. Normal cost: Calcuated on an open group basis to account for new entrant liaiblity.

Risks Associated with Measuring the Accrued Liability and Actuarially Determined Contribution

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

- 1. Investment risk actual investment returns may differ from the expected returns;
- 2. Asset/Liability mismatch changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
- Contribution risk actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
- 4. Salary and Payroll risk actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
- 5. Longevity risk members may live longer or shorter than expected and receive pensions for a period of time other than assumed;
- 6. Other demographic risks members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

Risks Associated with Measuring the Accrued Liability and Actuarially Determined Contribution

The computed contribution rate shown on Exhibit B.4 may be considered as a minimum contribution rate that complies with the Board's policy. Actual contributions are set by statute. The timely receipt of the contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the statutory rate do not necessarily guarantee benefit security.

Plan Maturity Measures

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	January 1, 2024	January 1, 2023	January 1, 2022	January 1, 2021	January 1, 2020
Ratio of the market value of assets to total payroll	2.1	2.2	2.8	2.5	2.5
Ratio of actuarial accrued liability to payroll	3.7	3.7	3.9	3.8	3.7
Ratio of actives to retirees and beneficiaries	1.5	1.5	1.5	1.5	1.6
Ratio of net cash flows to market value of assets	-1.0%	-2.3%	-2.2%	-2.1%	-2.9%
Duration of the actuarial accrued liability	12.3	12.3	12.3	12.1	N/A

Ratio of Market Value of Assets to Payroll

The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the market value of assets is 4.0 times the payroll, a return on assets 5% different than assumed would equal 20% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in plan sponsor contributions as a percentage of payroll.

Ratio of Actuarial Accrued Liability to Payroll

The relationship between actuarial accrued liability and payroll is a useful indicator of the potential volatility of contributions for a fully funded plan. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time.

The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the actuarial accrued liability is 5.5 times the payroll, a change in liability 2% other than assumed would equal 11% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also plan sponsor contributions) as a percentage of payroll.

Risks Associated with Measuring the Accrued Liability and Actuarially Determined Contribution

Ratio of Actives to Retirees and Beneficiaries

A young plan with many active members and few retirees will have a high ratio of active to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0.

Ratio of Net Cash Flow to Market Value of Assets

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

Duration of Actuarial Accrued Liability

The duration of the actuarial accrued liability may be used to approximate the sensitivity to a 1% change in the assumed rate of return. For example, duration of 10 indicates that the liability would increase approximately 10% if the assumed rate of return were lowered 1%.

Additional Risk Assessment

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability.

Risks Measures – Low Default Risk Obligation Measure

Introduction

In December 2021, the Actuarial Standards Board (ASB) adopted a revision to Actuarial Standard of Practice (ASOP) No. 4, Measuring Pension Obligations and Determining Pension Plan Costs or Contributions. The revised ASOP No. 4 requires the calculation and disclosure of a liability referred to by the ASOP as the "Low-Default-Risk Obligation Measure" (LDROM). The rationale that the ASB cited for the calculation and disclosure of the LDROM was included in the Transmittal Memorandum of ASOP No. 4 and is presented below (emphasis added):

"The ASB believes that the calculation and disclosure of this measure provides appropriate, useful information for the intended user regarding the funded status of a pension plan. The calculation and disclosure of this additional measure is not intended to suggest that this is the "right" liability measure for a pension plan. However, the ASB does believe that this additional disclosure provides a more complete assessment of a plan's funded status and provides additional information regarding the security of benefits that members have earned as of the measurement date."

Comparing the Accrued Liabilities and the LDROM

One of the fundamental financial objectives of the El Paso County Retirement Plan (EPCRP) is to finance each member's retirement benefits over the period from the member's date of hire until the member's projected date of retirement (entry age actuarial cost method) as a level percentage of payroll. To fulfill this objective, the discount rate that is used to value the accrued liabilities of EPCRP is set equal to the expected return on the Fund's diversified portfolio of assets (referred to sometimes as the investment return assumption). For EPCRP, the investment return assumption is 7.00%.

The LDROM is meant to approximately represent the lump sum cost to a plan to purchase low-default-risk fixed income securities whose resulting cash flows essentially replicate in timing and amount the benefits earned (or the costs accrued) as of the measurement date. The LDROM is very dependent upon market interest rates at the time of the LDROM measurement. The lower the market interest rates, the higher the LDROM, and vice versa. The LDROM results presented in this report are based on the entry age actuarial cost method and discount rates based upon the intermediate rate from the FTSE Pension Discount Curve and Liability Index published by the Society of Actuaries. This rate is 4.80% as of December 31, 2023. This measure may not be appropriate for assessing the need for or amount of future contributions. This measure may not be appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligation.

The difference between the two measures (Valuation and LDROM) is one illustration of the savings the sponsor anticipates by taking on risk in a diversified portfolio.

Valuation AAL	LDROM AAL				
\$782,274,483	\$1,020,514,423				

30-YEAR BASELINE PROJECTION
